About

Computer Science Engineering student with strong skills in **C++, JavaScript, DSA, backend development, debugging, and AI-assisted workflows**. Experienced in building **system-level and full-stack applications** with knowledge of **Operating Systems, DBMS, APIs, OOP, and Computer Networks**. Familiar with **AI response evaluation, prompt engineering, technical reasoning, code review, and analytical problem solving**. Solved **500+ DSA problems** across coding platforms.

Skills

Programming Languages: C/C++, JavaScript, TypeScript, Python (Basics), SQL, HTML5, CSS3

Frontend Technologies: React.js, Tailwind CSS, Responsive Design, DOM Manipulation

Backend & Database: Node.js, Express.js, REST APIs, MongoDB, Firebase, Firestore, Authentication, CRUD Operations, API Integration

AI & Generalist Skills: Prompt Engineering, AI Response Evaluation, Code Review, Technical Reasoning, Data Annotation, AI-assisted Development, Analytical Thinking, Debugging

Computer Science Fundamentals: Data Structures & Algorithms, Operating Systems, OOP, DBMS, Computer Networks, System Design (Basics), Memory Management

DevOps & Tools: Git, GitHub, Docker (Basics), Linux Fundamentals, Postman, VS Code, Chrome DevTools, Firebase Hosting

Achievements

- Solved **500+ DSA problems** on LeetCode and GeeksforGeeks.
- Maintained a **2-month GeeksforGeeks streak** demonstrating consistency and continuous learning.
- Built **system-level and full-stack projects** involving debugging, memory management, backend logic, Firebase, and API integration.
- Experienced in **AI-assisted workflows, technical reasoning, problem solving, and code analysis tasks**.

Coding Profiles

🔗 **LeetCode:** leetcode.com/u/nagoreamit

🔗 **GeeksforGeeks:** [geeksforgeeks.org/user/nagoreamit](https://www.geeksforgeeks.org/user/nagoreamit)

Projects

🔗 Memory Management Simulator

C++, Operating Systems

- Developed a system-level memory simulator implementing **paging, dynamic partitioning, FIFO/LRU page replacement, and TLB simulation**.
- Designed modular **C++ classes** for process management, memory allocation, and page table handling.
- Integrated debugging and visualization tools to analyze memory usage and simulate OS-level memory behavior.

🔗 Blood Bank Management System

JavaScript, Firebase

- Built a full-stack blood donation platform using **Firebase Firestore** for real-time donor and request management.
- Implemented authentication, donor registration, admin dashboard, filtering, and donor search by blood group/location.
- Designed a responsive UI and deployed the project using Firebase Hosting.
- Live Demo: blood-bank-management-sy-a4f48.web.app

Coursework

Operating Systems Data Structures & Algorithms DBMS Computer Networks Object-Oriented Programming Software Engineering Web Technologies System Design

Education
